

Re: Barrero LH, Katz JN, Dennerlein JT. Validity of self-reported mechanical demands for occupational epidemiologic research of musculoskeletal disorders. [Scand J Work Environ Health. 2009;35\(4\):245–260.](#)

There was an error in the published **references** of this paper:

Reference 28 following the text and reference 13 following the Appendix should be: Jensen LK, Eenberg W, Mikkelsen S. Validity of self-reporting and video-recording for measuring knee-straining work postures. *Ergonomics*. 2000;43:310–316.

In addition, the original review refers to 40 studies which reported a total of 490 independent individual-question validity assessments. The correct number is 39 studies which are presented in the appendix.
