Appendix I

List of variables

The list of variables used in the present report is given in appendix I with reference to the questions in the questionnaires. Those variables which are based on questions in the work and stress questionnaire are marked by WS and those based in the health questionnaire are marked by H. The variables which describe the prisons have no such reference because the data were not based on the questionnaire. The same applies to the laboratory measurements.

After the list of the single variables a list of the constructed sum scales is given.

Estimates of reliability are given for the variables which were used in the explanatory analyses and for which the calculation of reliability was possible either on the basis of the factor structure or the sum scale.

Vari- able	Question	Name of variable
