Request for help with evaluations for occupational safety intervention

We are extending the work of one of us (1), reviewing the effectiveness of workplace safety measures. We would like to identify relevant studies, including those not published in the "standard" scientific literature.

We are asking readers for help. If you have conducted, or know of, studies evaluating workplace safety measures, please send us details. We are interested in all types of safety measures. We want to find reports regardless of whether they have been published or not, whether they have appeared in peer-reviewed journals, in official reports or have never been "released" at all.

In our report, we would like to be able to list the source of all studies. However, we will respect confidentiality if necessary.

If you can help us, please send Professor Stephen J Guastello your information by 30 June 1995. We will send a copy of our report to all respondents.
